URL Where Application is Deployed on GCP:

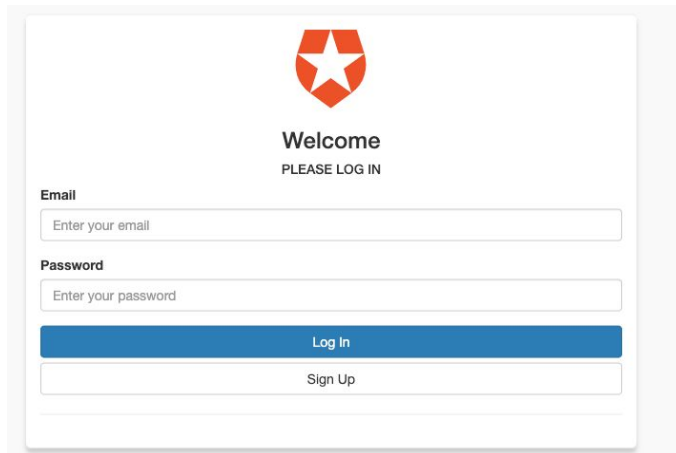

<https://brutonc-portfolio-project.wn.r.appspot.com>

URL for Account Creation/Login

(cut/paste this into browser window)

<https://brutonc-login-site.wn.r.appspot.com/login>

To Log in/Sign up:

A screenshot of a web application's login and sign-up page. At the top center is a red shield icon with a white star. Below it, the text "Welcome" is displayed in bold, followed by "PLEASE LOG IN" in a smaller font. The form contains two input fields: "Email" with the placeholder text "Enter your email" and "Password" with the placeholder text "Enter your password". Below these fields are two buttons: a blue "Log In" button and a white "Sign Up" button with a blue outline. The entire form is enclosed in a light gray border.

Steps to sign up(create credentials):

1. Enter email address and password
2. Hit the "SIGN UP" button

Steps to log in:

1. [Logout](#) first to get a fresh start (if needed)
2. Enter email address and password
3. Hit the "LOG IN" button
4. See below highlighted "sub" content for unique id and "id_token" for JWT

```

```

To Logout:

<https://brutonc-login-site.wn.r.appspot.com/logout>

Steps to log out (do this to create another account):

1. After you are logged in, add the “logout” route above.
2. You will see the “Logged out” message.
3. You can now login using created credential or sign up by using the “[Login](#)” route again.

DATA MODEL

NON-USER ENTITIES

| LABORATORY [Protected] | | | |
|------------------------|---------|---|-----------|
| Name | Type | Description | Required? |
| name | String | The name of the laboratory. (Unique) | Yes |
| containment_level | String | Must be one of the following: <div><div>BSL1</div><div>BSL2</div><div>BSL3</div><div>BSL4</div></div> | Yes |
| square_footage | Integer | Square footage of the Laboratory. | Yes |
| stored_agents | String | Ids of Stored Agent Entity (array) | No |

| AGENT [Protected] | | | | | | | |
|-------------------|--------|--|-----------|-----|-----|-----|-----|
| Name | Type | Description | Required? | | | | |
| name | String | The name of the agent. | Yes | | | | |
| risk_group_level | String | Must be one of the following: <table border="1"> <tr> <td>RG1</td><td>RG2</td><td>RG3</td><td>RG4</td></tr> </table> | RG1 | RG2 | RG3 | RG4 | Yes |
| RG1 | RG2 | RG3 | RG4 | | | | |
| type_of_agent | String | Type of agent; ex “bacteria, virus” | Yes | | | | |
| home_lab | String | Id of the lab holding agent | No | | | | |

USER ENTITY: SCIENTIST [not Protected]

Unique identifier for a user in the data model: auth0 value in user.sub returned from the login/signup site (see example below). **If a request needs to supply a user identifier, this “sub” value needs to be supplied.**

```
Logged in{"user":{"nickname":"gretchen","name":"gretchen@rhoc.com","picture":"https://s.gravatar.com/avatar/a9545b  
s=480&r=pg&d=https%3A%2F%2Fcdn.auth0.com%2Favatars%2Fgr.png","updated_at":"2020-11-  
28T03:03:24.769Z","sub":"auth0!5fc184bf118d0f006fa0dbae"},"id_token":"eyJhbGciOiJSUzI1NiIsInR5cCI6IkpXVCIsI

Io7KzvdvpwvvlahSu_2eb8GzvQ_TCFtWYSVcPabCc_RulqM15j-wlDtFESwOKx1DP0pXo_mmDtIYTQXsJuTcbooB
```

How the application maps a supplied JWT to the identifier of a user:

In my application, the express-JWT middleware extracts the JWT from the Authorization header as an OAuth2 Bearer token and makes the user id available to in req.user.sub. This value is used as the identifier of the Scientist, who is the owner of the lab. When a lab or agent is posted, the user/scientist will become the owner automatically and will be added to the list of scientists if not already added.

What is the relationship between the user entity and non-user entity?

The user entity in my app is the “Scientist” who can own a laboratory and/or an agent. The [data model section](#) above describes the relationships in detail.

API SPEC - USER: SCIENTIST

View All Scientists

Allows viewing of all users.

GET /scientists

Request

| Path Parameters | Request Body | Request Body Format | Accept Headers | Authentication |
|-----------------|--------------|---------------------|----------------|----------------|
| None | None | None | N/A | Not required |

Response

| Response Body Format | JSON |

}
```

Failure (trying to delete on this route)

Status: 405 Method Not Allowed

API SPEC - LABORATORY (NON-USER)

Create a Laboratory

Allows the User to Create a New Laboratory.

POST/labs

Request

| Path Parameters | Request Body | Request Body Format | Authentication |
|-----------------|--------------|---------------------|--------------------------|
| None | Required | JSON | Valid JWT token required |

Request JSON Attributes

| Name | Type | Description | Required? |
|-------------------|---------|---|-----------|
| Name | String | The name of the laboratory. | Yes |
| Containment Level | String | Must be one of the following: <div><div>BSL1</div><div>BSL2</div><div>BSL3</div><div>BSL4</div></div> | Yes |
| Square Footage | Integer | Square footage of the Laboratory. | Yes |
| Stored Agents | String | Id of Agent Entity | No |

Request Body Example

```
{
  "name": "Jos's Lab",
  "containment_level": "BSL2",
  "stored_agents": [],
  "square_footage": 5000
}
```

Response

| Response Body Format | JSON |
|----------------------|------|
|----------------------|------|

Response Statuses

| Outcome | Status Code | Notes |
|---------|------------------|--|
| Success | 201 Created | |
| Failure | 400 Bad Request | <ul style="list-style-type: none">- If the request is missing any of the 3 required attributes, the lab must not be created, and 400 status code must be returned.- The request square footage must be a number.- The containment level must be one of the 4 types above: (see JSON Attributes). |
| Failure | 401 Unauthorized | For expired or missing JWT. |
| Failure | 403 Forbidden | For violations of the uniqueness constraint. Name of the posted boat must be unique. User tries to access a resource that is not theirs. |

Notes

- Datastore will automatically generate an ID and store it with the entity being created.
- Lab Owner ID will be obtained from JWT token in the authentication field if it exists.
- The user id provided will be added to the "lab_owner" field
- The self attribute will contain the live link to the REST resource corresponding to this entity.
In other words, this is the URL to get this newly created lab.

Response Examples

Success

```
status : 201 Created
{
  "Id": "5694034018304000",
  "Name": "California Bio Lab",
  "containment level": "BSL2",
  "square footage": 1000,
  "lab_owner": "auth0|12344566",
  "self": "http://localhost:8080/labs/5694034018304000"}
```

Failure

```
Status: 400 Bad Request
{"Error": "The request does not meet the requirements"}
```

Status: 401 Unauthorized
{Error:"Missing or invalid JWT"}

Status: 403 Forbidden
{"Error":"Name of lab must be unique"}
{"Error":"Forbidden"}

View All Labs

Allows viewing of labs. Authenticated users can view their labs.

GET /labs

Request

| Path Parameters | Request Body | Request Body Format | Accept Headers | Authentication |
|-----------------|--------------|---------------------|------------------|---|
| None | None | None | Application/json | JWT Token Required for viewing "owned" labs. |

Response

| | |
|----------------------|-------------------|
| Response Body Format | JSON |
| Pagination? | 5 items at a time |

Response Statuses

| Outcome | Status Code | Notes |
|---------|--------------------|--|
| Success | 200 OK | |
| Failure | 401 Unauthorized | Missing or invalid JWT |
| Failure | 406 Not Acceptable | Use this when the user requests a content type not supported by the endpoint |

Success

```
status : 200 OK
{
  "labs": [
    {
      "stored_agents": [],
      "owner": "auth0|5fc1bab71bda000075e1e3fc",
      "square_footage": 5000,
      "name": "Jos's Lab",
      "containment_level": "BSL2",
      "id": "4809715754205184"
```

```

    },
    {
      "name": "B Lab",
      "owner": "auth0|5fc1bab71bda000075e1e3fc",

}

```

Failure

```

Status: 401 Unauthorized
{
  "Error": "Missing or invalid JWT"
}

```

```

Status: 406 Not Acceptable (when the client requests a content type not supported by the endpoint)
{ "Error": "Content type not offered "}

```

View a Lab

Allows viewing of a lab. Authenticated users can view their owned labs.

GET /labs/:lab_id

Request

| Path Parameters | Request Body | Request Body Format | Accept Headers | Authentication |
|-----------------|--------------|---------------------|------------------|---|
| lab_id | None | None | Application/json | JWT Token Required for viewing "owned" labs. |

Response

| | |
|----------------------|------|
| Response Body Format | JSON |
| Pagination? | N/A |

Response Statuses

| Outcome | Status Code | Notes |
|---------|--------------------|--|
| Success | 200 OK | |
| Failure | 401 Unauthorized | When bad JWT is used |
| Failure | 403 Forbidden | When user tries to access other user's entity. |
| Failure | 406 Not Acceptable | Use this when the user requests a content type not supported by the endpoint |

Success

```
status : 200 OK
{
  "id": "4809715754205184",
  "name": "Jos's Lab",
  "containment_level": "BSL2",
  "square_footage": 5000,
  "stored_agents": [],
  "owner": "auth0|5fc1bab71bda000075e1e3fc",
  "self": "http://localhost:8080/labs/undefined"
}
```

Failure

| |
|--|
| Status: 401 Unauthorized { Error:"Missing or invalid JWT" } |
| Status: 403 Forbidden {"Error": "Forbidden"} |
| Status: 406 Not Acceptable (when the client requests a content type not supported by the endpoint) { "Error": "Content type not offered"} |

Update a Laboratory (PUT)

Allows the User to Update a Laboratory

PUT /labs/:lab_id

Request

| Path Parameters | Request Body | Request Body Format | Authentication |
|-----------------|--------------|---------------------|---------------------------------------|
| lab_id | String | Updated Body | JWT Token Required if "owned" is True |

Request JSON Attributes

| Name | Type | Description | Required? |
|-------------------|------------------|---|--|
| Name | String | The name of the laboratory. | Yes |
| Containment Level | String | Must be one of the following: <div><div>BSL1</div><div>BSL2</div><div>BSL3</div><div>BSL4</div></div> | Yes |
| Stored agents | Array of strings | Id's of agents that have been PUT into the lab. | Yes *will not actually update this section |
| Square Footage | Integer | Square footage of the Laboratory. | Yes |

Notes:

- Stored_agents needs to be included, but will do nothing (this field can only be changed in the "Update relationship" route).

Request Body Example

```
{
  "name":"Slade's updated Lab",
  "containment_level":"BSL1",
  "stored_agents": [],
  "square_footage":1000
}
```

Response

| | |
|----------------------|------|
| Response Body Format | JSON |
|----------------------|------|

Response Statuses

| Outcome | Status Code | Notes |
|---------|------------------|---|
| Success | 204 No Content | |
| Failure | 400 Bad Request | If the request is missing any of the required attributes, the entity must not be updated, and 400 status code must be returned. |
| Failure | 401 Unauthorized | Missing or invalid JWT |
| Failure | 403 Forbidden | For missing or invalid JWT. |

Success

| |
|-------------------------|
| Status : 204 No Content |
|-------------------------|

Failure

| |
|--|
| Status: 400 Bad Request { "Error": "The request does not meet the requirements" } |
| Status: 401 Unauthorized { "Error": "Missing or invalid JWT" } |
| Status: 403 Forbidden { "Error": "Forbidden" } |

Update a Laboratory (PATCH)

Allows the User (scientist) to Update a Laboratory

PATCH /labs/:lab_id

Request

| Path Parameters | Request Body | Request Body Format | Authentication |
|-----------------|--------------|---------------------|---------------------------------------|
| lab_id | String | Updated Body | JWT Token Required if "owned" is True |

Request JSON Attributes

| Name | Type | Description | Required? | | | | |
|-------------------|---------|---|-----------|------|------|------|----|
| Name | String | The name of the laboratory. | No | | | | |
| Containment Level | String | Must be one of the following: <table><tr><td>BSL1</td><td>BSL2</td><td>BSL3</td><td>BSL4</td></tr></table> | BSL1 | BSL2 | BSL3 | BSL4 | No |
| BSL1 | BSL2 | BSL3 | BSL4 | | | | |
| Square Footage | Integer | Square footage of the Laboratory. | No | | | | |
| Agent | String | Id of Agent Entity | No | | | | |

Request Body Example

```
{ "name":"Updated Gretchen's Lab",  
  "containment_level":"BSL2",  
  "Square_footage":5000 }
```

Response

| | |
|----------------------|------|
| Response Body Format | JSON |
|----------------------|------|

Response Statuses

| Outcome | Status Code | Notes |
|---------|----------------|-------|
| Success | 204 No Content | |

| | | |
|---------|------------------|--|
| Failure | 400 Bad Request | The request must contain 3 or fewer parameters of only the following: "name", "containment level", "square footage" NOT:stored_agents, id or owner. stored_agents can only be modified in the PUT relationship route. |
| Failure | 401 Unauthorized | For missing or invalid JWT. |
| Failure | 403 Forbidden | For missing or invalid JWT. |

Success

| |
|-------------------------|
| Status : 204 No Content |
|-------------------------|

Failure

| |
|--|
| Status: 400 Bad Request { "Error": "The request does not meet the requirements" } |
| Status: 401 Unauthorized { "Error": "Unauthorized" } |
| Status: 403 Forbidden { "Error": "Missing or invalid JWT" } |

Delete a Laboratory

Allows the User to Delete a Laboratory

DELETE /lab/:lab_id

Request

| Path Parameters | | | Request Body | Request Body Format | Authentication | | | | | | |
|---|--------|---------------|--------------|---------------------|----------------|--------|--------|---------------|------|------|----------------------------------|
| <table><tr><th>Name</th><th>Type</th><th>Description</th></tr><tr><td>lab_id</td><td>String</td><td>ID of the lab</td></tr></table> | | | Name | Type | Description | lab_id | String | ID of the lab | None | None | JWT Token Required for Owned Lab |
| Name | Type | Description | | | | | | | | | |
| lab_id | String | ID of the lab | | | | | | | | | |

Note: This will not delete a relationship, you have to delete the relationship first and then delete the item.

Response

| | |
|----------------------|--|
| Response Body Format | Success: None Failure: JSON |
|----------------------|--|

Response Statuses

| Outcome | Status Code | Notes |
|---------|------------------|--|
| Success | 204 No Content | |
| Failure | 401 Unauthorized | If a user (scientist) does not have a valid JWT. |
| Failure | 403 Forbidden | |
| Failure | 502 Bad Gateway | If the id is invalid |

Success

Status: 204 No Content

Failure

Status: 401 Unauthorized

```
{  
  "Error": "Missing or invalid JWT"  
}
```

Status: 403 Forbidden

```
{  
  "Error": "Missing or invalid JWT"  
}
```

Status: 502 Bad Gateway

```
{  
  "Error": "Invalid request"  
}
```

API SPEC - AGENT (NON-USER)

Create an Agent

Allows the User to Create a New Agent.

POST/Agent

Request

| Path Parameters | Request Body | Request Body Format | Authentication |
|-----------------|--------------|---------------------|---|
| None | String | JSON | Protected: JWT Token Required. ID will be mapped to agent_owner field. |

Request JSON Attributes

| Name | Type | Description | Required? | | | | |
|------------------|--------|--|-----------|-----|-----|-----|-----|
| Name | String | The name of the agent. | Yes | | | | |
| Risk Group Level | String | Must be one of the following: <table><tr><td>RG1</td><td>RG2</td><td>RG3</td><td>RG4</td></tr></table> | RG1 | RG2 | RG3 | RG4 | Yes |
| RG1 | RG2 | RG3 | RG4 | | | | |
| Type of agent | String | Type of agent; ex "bacteria, virus" | Yes | | | | |
| Home Lab | String | Id of the lab holding this agent. This is posted as null when the agent is created and can be updated with the PUT/PATCH routes | No | | | | |

Request Body Example

```
{
  {
    "name": "SARS CoV-2 virus",
    "home_lab": {
      "id": null
    },
    "risk_group": "RG3",
    "type": "virus"
  }
}
```

```
}  
  
}
```

Response

| | |
|----------------------|------|
| Response Body Format | JSON |
|----------------------|------|

Response Statuses

| Outcome | Status Code | Notes |
|---------|------------------|---|
| Success | 201 Created | |
| Failure | 400 Bad Request | If the request is missing any of the 4 required attributes, the boat must not be added, and 400 status code must be returned. |
| Failure | 401 Unauthorized | Missing or invalid JWT. |
| Failure | 403 Forbidden | User tries to access a resource that is not theirs. |

Notes

- Datastore will automatically generate an ID and store it with the entity being created.
- Agent Owner ID will be obtained from JWT token in the authentication field if it exists.
- The scientist id provided will be added to the “owner” field.
- The self attribute will contain the live link to the REST resource corresponding to this agent. In other words, this is the URL to get this newly created agent.

Response Examples

Success

```
status : 201 Created  
{  
  "id": "5169050636255232",  
  "name": "E",  
  "risk_group": "RG3",  
  "type": "virus",  
  "owner": "auth0|5fc1bab71bda000075e1e3fc",  
  "home_lab": {  
    "id": null  
  },  
  "self": "http://localhost:8080/agents/5169050636255232"
```

```
}
```

Failure

Status: 400 Bad Request

```
{"Error": "The request does not meet the requirements"}
```

Status: 401 Unauthorized

```
{"Error": "Missing or invalid JWT"}
```

Status: 403 Forbidden

```
{"Error": "Forbidden"}
```

View All Agents

Allows viewing of Agents. Authenticated users can view their lab's agents.

GET /agents

Request

| Path Parameters | Request Body | Request Body Format | Accept Headers | Authentication |
|-----------------|--------------|---------------------|------------------|---|
| None | None | None | Application/json | JWT Token Required for viewing "owned" lab agents. |

Response

| | |
|----------------------|-------------------|
| Response Body Format | JSON |
| Pagination? | 5 items at a time |

Response Statuses

| Outcome | Status Code | Notes |
|---------|--------------------|--|
| Success | 200 OK | |
| Failure | 401 Unauthorized | Missing or invalid JWT |
| Failure | 406 Not Acceptable | Use this when the user requests a content type not supported by the endpoint |

Success

status : 200 OK

View an Agent

Allows viewing of Agents. Authenticated users can view their owned agents.

GET /agents/:agent_id

Request

| Path Parameters | Request Body | Request Body Format | Accept Headers | Authentication |
|-----------------|--------------|---------------------|------------------|---|
| agent_id | None | None | Application/json | JWT Token Required for viewing "owned" lab agents. |

Response

| | |
|----------------------|------|
| Response Body Format | JSON |
| Pagination? | N/A |

Response Statuses

| Outcome | Status Code | Notes |
|---------|--------------------|--|
| Success | 200 OK | |
| Failure | 401 Unauthorized | When bad JWT is used |
| Failure | 403 Forbidden | When user tries to access other user's entity. |
| Failure | 406 Not Acceptable | Use this when the user requests a content type not supported by the endpoint |

Success

```
status : 200 OK
{
  "name": "rabies ",
  "risk_group": "RG3",
  "type": "virus",
  "owner": "auth0|5fc1bab71bda000075e1e3fc",
  "home_lab": {
    "id": null
  },
  "self": "http://localhost:8080/agents/undefined"
}
```

Failure

Status: 401 Unauthorized

```
{  
  "Error": "Missing or invalid JWT"  
}
```

Status: 403 Forbidden{

```
"Error": "Forbidden"  
}
```

Status: 406 Not Acceptable (when the client requests a content type not supported by the endpoint)

```
{ "Error": "Content type not offered"}
```

Update an Agent(PUT)

Allows the User to Update a Laboratory

PUT /agents/:agent_id

Request

| Path Parameters | Request Body | Request Body Format | Authentication |
|-----------------|--------------|---------------------|--|
| agent_id | String | Updated Body | JWT Token Required. ID will be mapped to agent_owner field. |

Request JSON Attributes

| Name | Type | Description | Required? | | | | |
|------------------|--------|---|--|-----|-----|-----|-----|
| Name | String | The name of the agent. | Yes | | | | |
| Home_lab | String | Id of the lab holding agent | Yes *will not actually update this section | | | | |
| Risk Group Level | String | Must be one of the following: <table><tr><td>RG1</td><td>RG2</td><td>RG3</td><td>RG4</td></tr></table> | RG1 | RG2 | RG3 | RG4 | Yes |
| RG1 | RG2 | RG3 | RG4 | | | | |
| Type of agent | String | Type of agent; ex "bacteria, virus" | Yes | | | | |

Notes:

- Home_lab needs to be included, but will do nothing (this field can only be changed in the "Update relationship" route).

Request Body Example

```
{
  "name": "Ebola",
  "home_lab": {
    "id": null
  },
  "risk_group": "RG3",
  "type": "virus"
}
```

Response

| | |
|----------------------|------|
| Response Body Format | JSON |
|----------------------|------|

Response Statuses

| Outcome | Status Code | Notes |
|---------|------------------|---|
| Success | 204 No Content | |
| Failure | 400 Bad Request | If the request is missing any of the 4 required attributes, the entity must not be updated, and 400 status code must be returned. |
| Failure | 401 Unauthorized | Missing or invalid JWT |
| Failure | 403 Forbidden | For violations of the uniqueness constraint. Name of the posted entity must be unique. |

Success

| |
|-----------------|
| status : 200 OK |
|-----------------|

Failure

| |
|--|
| Status: 400 Bad Request { "Error": "The request does not meet the requirements" } |
| Status: 401 Unauthorized {"Error": "Missing or invalid JWT"} |
| Status: 403 Forbidden {"Error": "Forbidden"} |

Update an Agent(PATCH)

Allows the User to Update an Agent

PATCH /agents/:agent_id

Request

| Path Parameters | Request Body | Request Body Format | Authentication |
|-----------------|--------------|---------------------|-----------------------------------|
| lab_id,agent_id | Required | Updated Body | JWT Token Required to match owner |

Request JSON Attributes

| Name | Type | Description | Required? | | | | |
|------------------|--------|---|-----------|-----|-----|-----|-----|
| Name | String | The name of the agent. | Yes | | | | |
| Risk Group Level | String | Must be one of the following: <table><tr><td>RG1</td><td>RG2</td><td>RG3</td><td>RG4</td></tr></table> | RG1 | RG2 | RG3 | RG4 | Yes |
| RG1 | RG2 | RG3 | RG4 | | | | |
| Type of agent | String | Type of agent; ex “bacteria, virus” | Yes | | | | |
| Home_lab | String | Id of the lab holding agent | Yes | | | | |

Request Body Example

```
{ "name": "mad virus",  
  "risk_group": "RG3",  
  "type": "virus"}
```

Response

| Response Body Format | JSON |
|----------------------|------|
|----------------------|------|

Response Statuses

| Outcome | Status Code | Notes |
|---------|----------------|-------|
| Success | 204 No Content | |

| | | |
|---------|------------------|---|
| Failure | 400 Bad Request | The request must contain 3 or fewer parameters of only the following: "name", "risk_group", "type" NOT: home lab, id or owner. Home_lab can only be modified in the PUT relationship route. |
| Failure | 401 Unauthorized | Missing or invalid JWT |
| Failure | 403 Forbidden | For violations of the uniqueness constraint. Name of the posted boat must be unique. |

Success

status : 200 Created

Failure

Status: 400 Bad Request
 {
 "Error": "The request does not meet the requirements"
 }

Status: 401 Unauthorized
 {
 "Error": "Unauthorized"
 }

Status: 403 Forbidden
 {
 "Error": "Missing or invalid JWT"
 }

Delete an Agent

Allows the User to Delete an agent. This will also remove the agent from any labs.

DELETE /agents/:agent_id

Request

| Path Parameters | | | Request Body | Request Body Format | Authentication | | | | | | |
|---|--|--|--------------|---------------------|----------------|----------|--------|---------------|------|------|----------------------------------|
| <table><tr><th>Name</th><th>Type</th><th>Description</th></tr><tr><td>agent_id</td><td>String</td><td>ID of the lab</td></tr></table> | | | Name | Type | Description | agent_id | String | ID of the lab | None | None | JWT Token Required for Owned Lab |
| | | | Name | Type | Description | | | | | | |
| | | | agent_id | String | ID of the lab | | | | | | |
| | | | | | | | | | | | |
| | | | | | | | | | | | |

Note: This will not delete a relationship, you have to delete the relationship first and then delete the item.

Response

| | |
|----------------------|--|
| Response Body Format | Success: None Failure: JSON |
|----------------------|--|

Response Statuses

| Outcome | Status Code | Notes |
|---------|------------------|--|
| Success | 204 No Content | |
| Failure | 401 Unauthorized | If a user (scientist) does not have a valid JWT. |
| Failure | 403 Forbidden | |
| Failure | 502 Bad Gateway | If the id is invalid |

Success

Status: 204 No Content

Failure

```
Status: 401 Unauthorized
{
  Error: "Missing or invalid JWT"
}
```

Status: 403 Forbidden

```
{  
  "Error": "Missing or invalid JWT"  
}
```

Status: 502 Bad Gateway

```
{  
  "Error": "Invalid request"  
}
```

API SPEC - RELATIONSHIP UPDATES

Update an Lab/Agent Relationship (PUT)

Allows the User to Update the LAB/AGENT relationship

PUT /labs/:lab_id/agents/:agent_id

Request

| Path Parameters | Request Body | Request Body Format | Authentication |
|------------------|--------------|---------------------|---|
| Lab_id, agent_id | None | None | JWT Token Required. ID will be mapped to agent_owner field. |

Notes:

- This will add an agent to the “stored_agents” array in a lab and “home_lab” to the agent entity. Only one lab can be in the home_lab. Use the delete relationship route to remove.

Response Statuses

| Outcome | Status Code | Notes |
|---------|------------------|--|
| Success | 204 No Content | |
| Failure | 401 Unauthorized | Missing or invalid JWT |
| Failure | 403 Forbidden | User tries to update protected entity. |

Success

status : 204 No Content

Failure

Status: 401 Unauthorized
{“Error”: “Missing or invalid JWT”}

Status: 403 Forbidden
{“Error”: “Forbidden”}

Delete a Lab/Agent Relationship

Allows the User to DELETE the LAB/AGENT relationship

DELETE /labs/:lab_id/agents/:agent_id

Request

| Path Parameters | Request Body | Request Body Format | Authentication |
|------------------|--------------|---------------------|--|
| Lab_id, agent_id | None | None | JWT Token Required. ID will be mapped to agent_owner field. |

Notes:

- This will add an agent to the “stored_agents” array in a lab and “home_lab” to the agent entity. Only one lab can be in the home_lab. Use the delete relationship route to remove.

Response Statuses

| Outcome | Status Code | Notes |
|---------|------------------|--|
| Success | 204 No Content | |
| Failure | 401 Unauthorized | Missing or invalid JWT |
| Failure | 403 Forbidden | User tries to update protected entity. |

Success

status : 204 OK

Failure

Status: 401 Unauthorized
{\"Error\": \"Missing or invalid JWT\"}

Status: 403 Forbidden
{\"Error\": \"Forbidden\"}

API SPEC - UNALLOWED ROUTES

The following root collection routes will yield an error

DELETE /labs

PUT/labs

PATCH/labs

DELETE /agents

PUT/agents

PATCH/agents

DELETE /scientists

PUT/scientists

PATCH/scientists
